

CaaS(Web) – PicoCTF Writeup

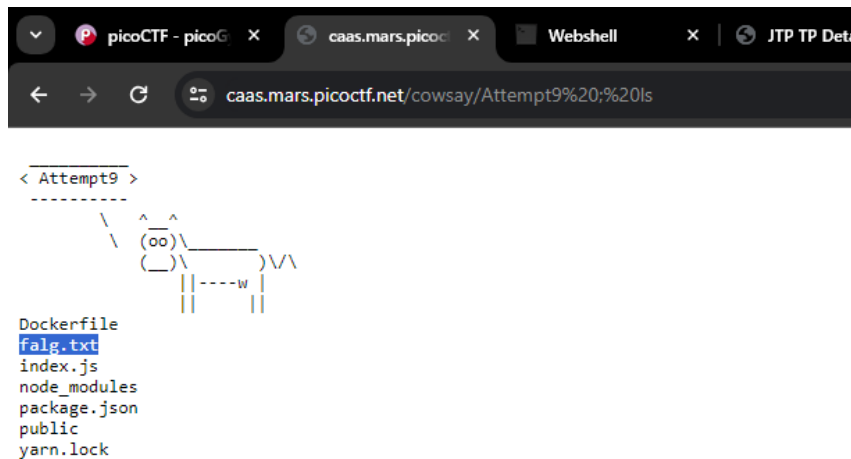

In this CTF, we see a website-ish made program appears and it gives us another link and whatever we type will be displayed like this, well I had no clue on how to get it from this but then

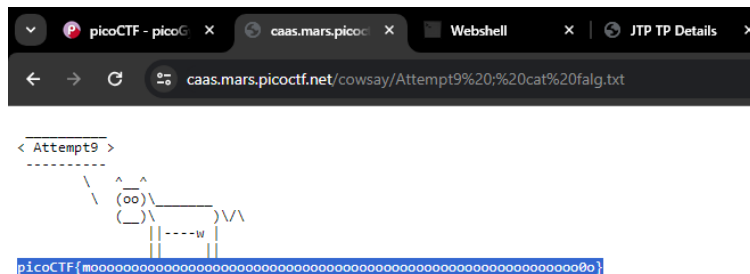

I searched up to Chatgpt on what is CaaS, which didn't help as much as "What is cowsay" did where it told me it is a tool used in Linux, from the past overthewire-bandit stuff I thought about using it's command to find a clue

First after the message I added ; ls to see the list of all folders present in this link where we found a flag.txt file which could be the file where our flag is stored

After this we added ; cat falg.txt in the url after message to view what is inside falg.txt file where we got our flag as

[illegible]
